EDUCATION

Hunter College, CUNY, B.A. in Computer Science, GPA: 3.66 / 4.0 *Aug 2023 – May 2027*
Relevant Coursework: Data Structures & Algorithms, Databases & SQL Programming, Advanced ML & AI Theory
Member: Girls Who Code, Rewriting the Code, Women in Computer Science, Computer Science Club

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, HTML/CSS, C++, SQL
Frameworks & Tools: React.js, Vue.js 3, Tailwind CSS, Figma, Flask, FAST API, Git/Github

WORK EXPERIENCES

Accenture & Break Through Tech **New York, NY**
AI/ML Fellow | Python, Scikit-learn, AI *Aug 2026 – Present*
- Performed exploratory data analysis and feature engineering on an imbalance healthcare dataset to predict coronary heart disease risk from lifestyle and demographic indicators.
- Trained and evaluated multiple classification models using PR-AUC, F1, and ROC-AUC to address severe class imbalance.
- Conducted subgroup fairness analysis across race, age, and income to assess model bias and ensure equitable performance across demographic groups.

TransPerfect **New York, NY**
Software Engineering Intern | Vue.js 3, TypeScript, JavaScript, Composition API *Jun 2026 – Aug 2026*
- Refactored a legacy JavaScript file storage application into Vue.js 3 with the Composition API and Typescript, reducing the codebase size by ~20% and improving maintainability.
- Engineered reusable Vue components with typed props and named slots, implementing dynamic folder navigation, breadcrumb routing, and multi-select functionality.
- Developed custom Vue composables and integrated the browser History API to persist pagination and navigation state.

Hunter College, CUNY **New York, NY**
Teaching Assistant | Undergraduate Teaching *Mar 2025 – Present*
- Tutored 400+ students by breaking down complex programming and data structure concepts into clear, understandable explanations.
- Built auto graders to automatically test and grade student code submissions.
- Designed homework problems covering Python fundamentals and data structures.

PROJECTS

NYC 311 Complaint Resolution Predictor | Python, React, Tailwind CSS, Gemini *Sept 2026 – Present*
- Developed full-stack web app that forecasts NYC 311 complaint resolution time using LightGBM model and a Gemini-powered conversational agent.
- Built the React chat interface with conversation history sidebar and prediction details panel, plus a conversational intake flow that collects the issue, location, and filing method before each prediction.
- Designed the UI in Figma, integrated the agent and model with the FastAPI backend, and conducted reliability testing on chat behavior and prediction outputs.

Heartbeats | Python, Flask, Machine Learning, Tailwind CSS *Sept 2025 – Dec 2025*
- Built and deployed a music-matching web app with a team that recommends similar-vibe songs from user-uploaded tracks using audio feature extraction and similarity scoring.
- Designed the interface in Figma and developed the frontend with Tailwind CSS, integrating it with the Flask backend..

Sustain You | Javascript, HTML, CSS *Feb 2024*
- Developed a multi-page, sustainability-focused fashion website showcasing eco-friendly clothing, makeup brands, and local events.
- Designed and implemented a consistent navigation system, brand discovery page, and sustainability tips across four interconnected HTML pages to improve user experience.

LEADERSHIP

Girls Who Code College Loops **New York, NY**
Vice President *June 2026 – Present*
- Spearheaded planning and execution of 3+ events per semester with 30+ student attendees, supporting a community of 200+ members through technical and professional growth.
